Southern Pulpwood Production, 1990

John S. Vissage and Patrick E. Miller

INTRODUCTION

The findings of the annual 100-percent canvass of pulpmills that procure roundwood or wood residues from 12 Southern States (fig. 1) are presented in this publication. Canvass data are compiled and analyzed on an alternating basis by personnel from the Southern and Southeastern Forest Experiment Stations. Of the 103 mills canvassed, 88 responded. Past canvass data and other sources of information were used for mills that did not respond. Data from mills reporting nonstandard units were converted to cords using regional conversions. The format and order of tables in this periodic report are standard regardless of table references in the text.

PULPWOOD

Pulpwood production increased to over 65 million cords in 1990 (table 1). Alabama ranked first in pulpwood production with over 9.9 million cords. Second-ranked Georgia and third-ranked Mississippi experienced 4- and 7-percent production increases, respectively. Together, these three States supplied nearly 42 percent of the total pulpwood production.

Southern pulpwood production increased almost 20 percent after 1981 to meet the demand created by greater pulping capacity (fig. 2). Softwood continued to be the primary species group used for pulpwood, but the proportion of hardwood to total production increased from 26 percent in 1981 to 29 percent in 1990 (fig. 3). Softwood production increased about 15 percent and hardwood production about 34 percent after 1981.

The Midsouth produced about 56 percent of the South's total pulpwood (table 5). Although softwood production was nearly equal in both regions, the Midsouth accounted for nearly 64 percent of the hardwood.

Roundwood

In 1990, Alabama led roundwood production with 7.3 million cords (table 2). Second-ranked Georgia produced 6.5 million cords, and Mississippi ranked third with 5.6 million cords. The South's roundwood production increased about 9 percent. Softwood roundwood production increased about 14 percent from 1989 to 1990; however, hardwood production decreased almost 1 percent. Softwoods comprised about 69 percent of roundwood production, with hardwoods contributing about 31 percent.

Georgia, with over 5.2 million cords, was the leader in softwood roundwood production (table 2). Alabama and Florida followed with 4.3 and 3.6 million cords, respectively. With 3.0 million cords, Alabama was the leader in hardwood roundwood production. Second-ranked Mississippi produced 2.4 million cords of hardwood, and third-ranked North Carolina produced 1.6 million cords.

In 1990, 9 counties or parishes produced over 300,000 cords of roundwood, 20 counties or parishes produced 200,000 to 300,000 cords, and 118 counties or parishes produced 100,000 to 200,000 cords (tables 6-17).

Roundwood continued as the primary material used for pulp manufacture and accounted for 70 percent of total production. Roundwood production increased about 25 percent from 1981 to 1990. Softwood production increased about 19 percent and hardwood production increased about 47 percent during the same period. About 31 percent of the roundwood was hardwood in 1990, compared to 26 percent in 1981.

Wood Residues

The amount of mill residues used for pulp manufacture increased slightly from 1989 to 1990 (table 3). Georgia produced 2.8 million cords of wood residues. Alabama, with about 2.6 million cords, was the

John S. Vissage and Patrick E. Miller are foresters, Forest Inventory and Analysis Unit, U.S. Department of Agriculture, Forest Service, Southern Forest Experiment Station, Starkville, MS 39759.

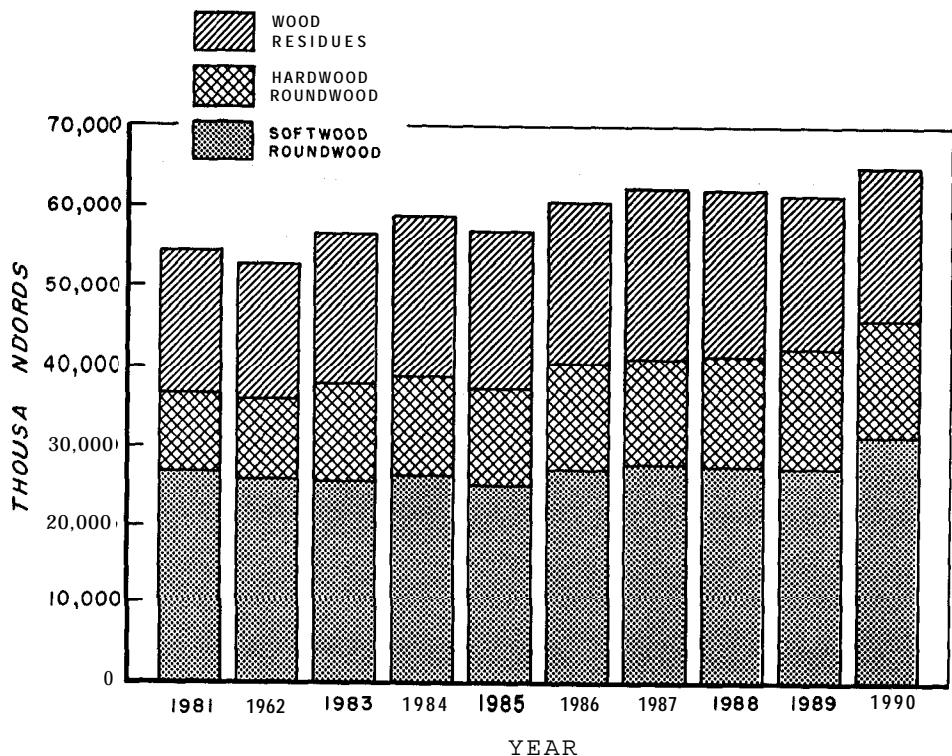

Figure 2. -Pulpwood production trends in the South, 1981-90.

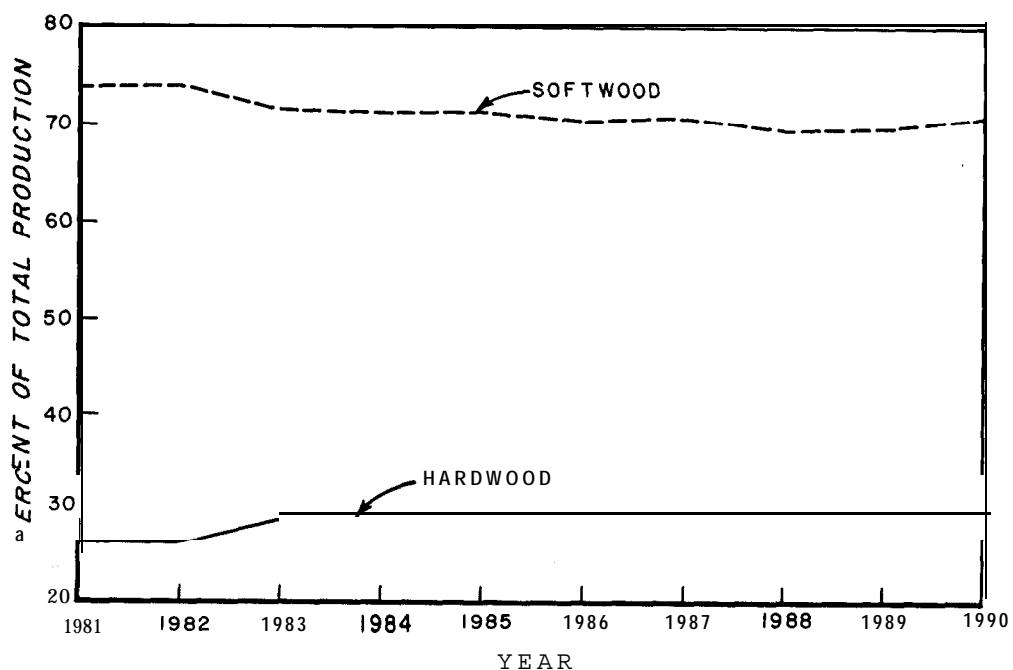

Figure 3. -Proportion of softwood and hardwood to total pulpwood production in the South, 1981-90.

second-leading producer. Mississippi ranked third with about 2.4 million cords. Georgia led softwood residue production with 2.6 million cords, and Arkansas led hardwood residue production with almost 0.9 million cords. Residue chips accounted for almost all wood residues produced in the South (table 4), and about 75 percent of the residue chips were softwood.

Production of wood residues increased almost 10 percent after 1981 but stabilized at about 20 million cords after 1984 (fig. 2). Production of hardwood residues increased about 7 percent and production of softwood residues increased about 11 percent after 1981.

MILLS

The number of wood-using pulpmills in the South decreased from 114 to 103 between 1981 and 1990 (fig. 4). Three mills closed in 1990. Alabama, with 15, had the most mills operating within a State. Five mills outside the 12-State region used pulpwood from the South in 1990 (table 19). One pulpmill was under construction in 1990 (table 20, fig. 4).

Pulping capacity increased about 2.4 percent from 1989 to 1990 to a record 129,290 tons per day (table 18). Alabama, followed closely by Georgia, led in pulping capacity. Sulfate continued as the dominant pulping process with almost 81 percent of the total capacity.

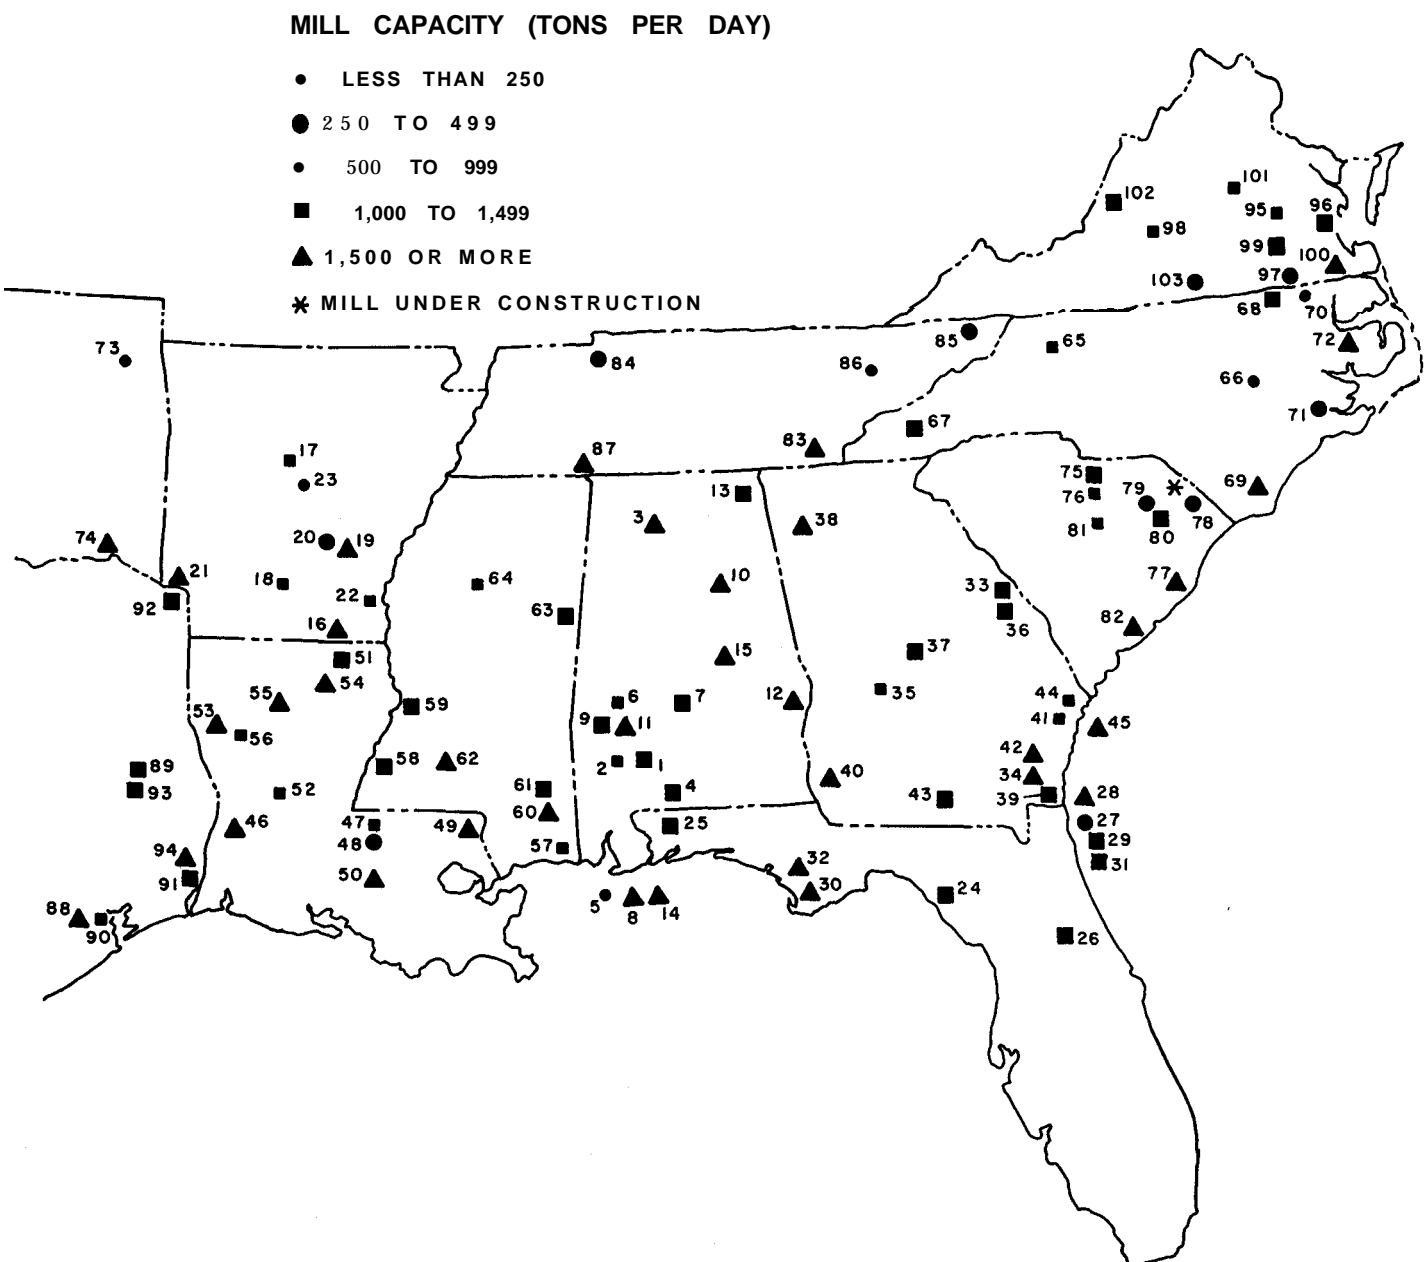

Figure 4. -Location and capacity of pulpmills operating in and drawing wood from the 12 Southern States in 1990. (Numerals are coded to table 18.)

Vissage, John S; Miller, Patrick E. 1992. Southern pulpwood production, 1990. Resour. Bull. SO-175 New Orleans, LA: U.S. Department of Agriculture, Forest Service, Southern Forest Experiment Station. 30 p.

In 1990, Southern pulpwood production exceeded 65 million cords, roundwood production increased 9 percent to 45.6 million cords, and wood residue production increased 2 percent to 19.4 million cords. The pulping capacity of the 103 Southern pulpmills was 129,290 tons per day. One pulpmill was under construction.

Keywords: Pulpmills, roundwood, wood residues.
